 Theme

ENERGY CERTIFICATION OF BUILDINGS

PROJECT PRESENTATION SCORE

Seville, 13th December 2012

● ● ● **Objectives**

The objective of this local information seminar, organized in collaboration with the Official Association of Technical Architects of Seville, was to inform and educate this group of construction professionals on the importance of energy efficiency and sustainability in construction now and in the near future.

Also, in a time of crisis and unemployment in the sector in Spain, the seminar wanted to show other employment alternatives related to the promotion of sustainable construction and energy efficiency.

With Score project presentation was intended to present reality in our region and its comparison with other regions participating in the project.

Contributors

Mr. José Carlos Claro – Technical Architect. Professor at the University of Seville and Technical Advisor for Official Association of Technical Architects of Seville. Environment Working-Team.

- Energy certification of buildings
- Current status of energy certification and certifying technician
- The short-term future of energy certification

Mr. Francisco Losada – Architect of “Patrimonos 48 Arquitectos”. Technical team of the Chamber of Commerce of Seville.

- The SCORE project: objectives, stages and expected results.
- The project's contribution to energy certification in Europe.

● ● ● **Conclusion – Open Issues**

The seminar was attended by 128 participants, generating great interest among construction professionals.

These professionals could see that issues related to energy efficiency are basic nowadays with existing regulations and the future legislation will be much more demanding in these matters, opening many new employment opportunities in the sector.

The presentation of the project Score showed that this reality is present in many countries and even discovered for many assistants the reality in Andalusia, much more advanced than they thought.
